## Unfair Health Inequalities in the UK

### Part of the III Inequalities Seminar Series

Tuesday 18 January 2022, 12:30pm to 1:30pm. Online public event.

In this seminar, Dr Paolo Brunori will discuss his recent paper in which he measures unfair health inequality in the UK using a novel data-driven empirical approach. He shows that unfair inequality is a substantial fraction of the total explained health variability (health variability being the result of circumstances beyond individual control and health-related behaviours). This finding holds no matter which exact definition of fairness is adopted: using both the fairness gap and direct unfairness measures, each evaluated at different reference values for circumstances or effort.

**Speaker:** Dr Paolo Brunori (Assistant Professorial Research Fellow, LSE III)

**Chair:** Professor Francisco Ferreira (Amartya Sen Professor of Inequality Studies and LSE III Director)
